In view of the lack of a rejection under the prior art, the election requirement has been withdrawn, and all the claims of record have been considered.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the second cushioning member, as set forth in claims 7-9, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims 1-9 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-9 as a whole contain confusing, vague, awkward and grammatically incorrect language, and should be carefully revised to clearly and definitely set forth the invention. Examples of such language are: In claim 1, line 2, "enforced in a direction of falling backwards", line 10, "strained by an elastic force", and line 14, "more in an upward direction than a standard position".

Moreover, in claim 1, there is insufficient structure recited to support the front edge being "movably supported in a vertical direction". The "standard position setting member" has not been interconnected and located relative to the other elements. The "standard position" and "standard posture" have not been defined. Lines 15-20 of claim 1 are confusing and unclear.

In claim 3, the phrase "for enforcing the front edge..." is confusing and awkward, as is "for balancing the front edge.. in the standard position against tension...".

In claim 4, "strained between" is awkward, as is "being protruded inside", in claim 5.

In claims 7-9, "another cushioning member" should be recited as a "second" cushioning member. The phrase "spread over together", is confusing.

Claims 1-9 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bell, Karg, Geller et al, Mutz Jr, Ryan, Pajon et al, Picard and Fujita et al show various features of the invention.
